

Dent Prevent Elevator Wall Protection

The Dent Prevent is an economic solution for protecting elevator door frames from denting and scratching caused by movers and contractors working in your building. Dent Prevent helps avoid ugly, costly damage.

- Dent Prevent is a sturdy, heavy-duty bullet-proof Lexan material that is easily put into place during moves by simply securing the suction cups onto the elevator frame.
- Provides temporary protection against damage from carts, bulky material and building equipment during construction and renovations as well as against furniture damage during office moves.
- Constructed of a heavy-duty PVC plastic designed to protect against the toughest abrasions and blunt forces.
- Use suction cups to quickly attach to elevator door frames.
- Easily stores when finished and can be reused.
- Used in conjunction with elevator cab pads, Dent Prevent provides the best protection against premature elevator entryway and cab damage.
- Dimensions: 3.25" W x 82 " H x 12.5" D
