

Ultra Entry Roll Mats

Ultra Entry Recessed Roll Matting is heavy-duty entrance matting designed for use in recesses and wall-to-wall applications in high-traffic locations indoors and outside.

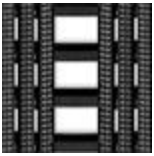

Ultra Entry Mats are as durable as recessed metal mats and grilles yet can be cut to fit on site, reducing installation time and costs. Additionally, Ultra Entry matting can easily be angle cut around revolving doors, columns and door frames into virtually any shape. These recessed floor mats are perfect for floors that are not level.

Unlike noisy recessed aluminum mats, Ultra Entry Recessed Mats have a solid construction, with the polypropylene surface bonded directly to the sturdy vinyl duckboard backing for a quiet entryway.

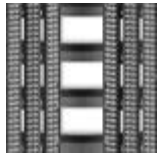

The 7/16" thick construction fits into most recesses and is ideal for high foot-traffic entrances. This roll matting is available in 3' and 4' wide rolls in any length up to 40'.

Thanks to their ability to be modified in the field, these mats can ship out right away and prevent construction delays like metal mats that often have much longer lead times.
